

MINECORP WIRING LOOM

LIGHTING MADE EASY

Designed to make vehicle light controls safe and easy to use, with finger tip operations and a back light display for night time driving. The one button test function makes light pre-checking quick and simple. The beeper has an adjustable on/off when the beacon is flashing for use when not on a mine site.

Minecorp's intelligent light control system is independently wired for easy plug and play installation without affecting the existing vehicles wiring, this decreases the errors associated with fitting on different vehicles and makes maintenance quick and easy.

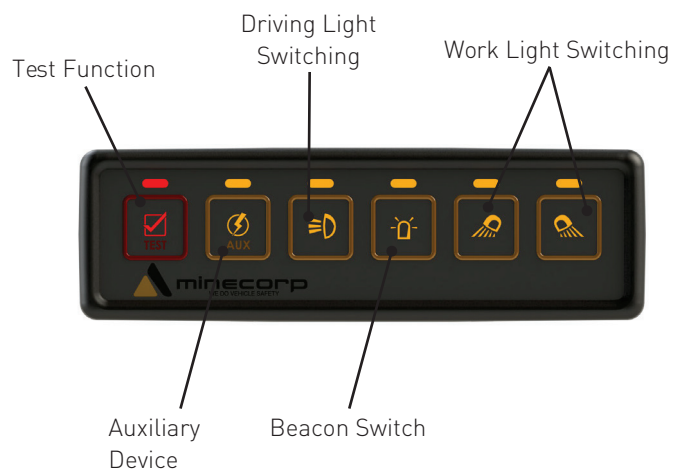

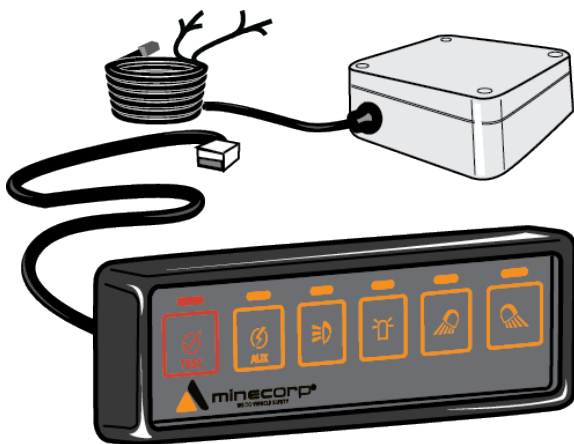

PRODUCT NUMBER

- **M67500012/S** : Toyota Hilux Pick Up
- **M67390012/S** : Nissan Gu Patrol Pick Up
- **M67510014/S** : Toyota Landcruiser 79 Series Pick Up

FEATURES

- Includes switch panel, brackets, full loom & control module (fuses & relays integrated)
- Onsite light test function provides a quick and easy check
- Independent wiring from vehicle electrics, reduces fitting time and errors
- Vehicle specific mounting system, reduces fitting time and errors
- Can save up to 4 hours fitting time when compared to individual component installation of a full fit-out
- Reverse beacon modes with/without beeper sounding for work and domestic use
- Easy to read switch panel has adjustable backlighting for driver comfort and safety
