

WHEEL CHOCK

SAFETY & VISIBILITY

Vehicles Wheel chocks are used when a vehicle has the potential to roll, even though the vehicle may have the hand brake applied and be in gear. The ground may be wet and/or the vehicle parked on a slope. The wheel chock gives the vehicle added protection against rolling, and the driver piece of mind.

NOTE: Most mines require wheel chocks as part of the Fatal Risk Protocol.

PRODUCT NUMBER

- **M63000034/S** : Wheel Chocks & Mount Internal
- **M63000018/S** : Wheel Chocks & Mount External
- **M63000022/S** : Wheel Chocks Only
- **M63003054/S** : Mount Only Internal
- **M63003020/S** : Mount Only External

FEATURES

- Ideal size for light and medium vehicles
- Anti-slip rubber construction
- Rope handles for easy use
- Light weight, anti corrosive on mount
