

LIGHTS ON KIT

INCREASED VISIBILITY

Lights on kits will significantly increase vehicle visibility when in use on a work site. The low beam head light is wired through the ignition switch so that the lights come on when the key is turned in the ignition. The kit is simple to install and plugs into existing wiring and connectors, all of which are located in the vehicles cabin. Lights on kits are now becoming a required feature for compliance on an increasing number of mining sites.

FEATURES

- Allows all standard vehicle light functions excluding the off position whilst ignition is active
- Easy removal if required for vehicle resale
- Required feature for compliance on work sites
- Straight forward install and cost effective
- Simple installation into existing wiring and connectors within the vehicle cabin
