The Minecorp Commercial Tray (MCT) range has truly raised the bar for tray and body design and functionality. Designed and manufactured in Australia, utilising state of the art 3D design software, quality assured manufacturing processes and technology, you can be assured our trays will keep working for you year after year.

The engineered welded steel frame provides the optimum platform for strength and durability whilst keeping overall weight to a minimum. You have the choice of welded steel checker plate or aluminium flooring, making our trays one of the lightest but toughest on the market. Reduced weight means increased payload and the option of carrying more tools and equipment without exceeding allowable limits.

All Minecorp Load Guard's are tested to AS/NZS 4034.1:2008 for load impact, to protect the vehicle's occupants from loads up to 60KG. The Self Supporting Headboard mounts to the vehicle's tub body, creating a strong structure for the Load Guard to be secured to. All external accessories are powder coated for long lasting protection against harsh environments.
